SUMMARY

Gameplay Programmer specializing in Unity and C#, with professional contract experience and extensive hands-on development across gameplay systems, player mechanics, combat, AI, puzzle systems, progression, UI, physics and interactive experiences.

Experienced translating game-design requirements into functional gameplay systems, prototyping mechanics, debugging and iterating on player-facing features, and collaborating with designers and artists in small development teams.

Professional experience includes a 7-month paid gameplay programming contract with Luza Group, approximately six months contributing to an indie multiplayer-focused project, and an ongoing Unity/C# collaboration on an unannounced indie title.

Additional development experience includes multiple solo and team projects using Unity, Unreal Engine/C++, GXP Engine/C#, Processing/Java and web technologies.

Seeking opportunities as a Gameplay Programmer, Unity Programmer or Associate/Junior Gameplay Programmer, including remote, contract and full-time positions.

EXPERIENCE

Gameplay Programmer

Paid Contract · 7 months

Memoriza / Luza Group

- Implemented the gameplay logic for an onboarding game developed for Luza Group using Unity and C#.
- Translated design requirements into functional gameplay systems and player interactions.
- Developed memory and matching mechanics, quiz/game-flow systems, progressive difficulty and scoring systems.
- Implemented and integrated gameplay UI and interaction logic.
- Worked collaboratively with design and art team members to integrate the final playable experience.
- Delivered the project as a completed paid contract.

Gameplay Programmer

Indie Collaborative Project · ~6 months

Duck Duck Kill

- Developed gameplay systems in Unity and C# for a multiplayer-focused indie project.
- Implemented player shooting mechanics, enemy behaviour patterns, collision systems, scoring and physics interactions.
- Focused on responsive controls and moment-to-moment gameplay feel.
- Collaborated with a small development team under a revenue-share model.
- Contributed to gameplay implementation throughout approximately six months of development before the project was discontinued.

Gameplay Programmer

Ongoing Collaboration · Oct 2025 – Present

Unannounced Indie Title

- Developing gameplay systems in Unity and C# alongside an artist/designer.
- Implementing core gameplay mechanics and interactive systems.
- Translating design ideas into functional gameplay features.
- Working within a small-team development environment with shared responsibility for implementation and iteration.
- Project currently in development under a revenue-share arrangement.

PROJECTS

Duck Duck Kill | Unity · C# · Gameplay / AI / Combat 2D arcade-style shooter and one of the user's primary gameplay programming projects.

- Player shooting
- Enemy AI and movement patterns
- Collision detection
- Scoring
- Physics interactions
- Responsive gameplay controls

Memoriza y Valoriza | Unity · C# · Educational / Onboarding Game Educational memory and value-based game developed as a paid Luza Group contract.

- Matching systems
- Memory mechanics
- Quiz/game flow
- Progressive difficulty
- Scoring systems
- UI and player interactions

Stick to the Journey | Unity · C# · Puzzle Complete drag-and-drop zebra puzzle game.

- Drag-and-drop interactions
- Puzzle mechanics
- Level progression
- State management
- UI systems
- Gameplay logic

FoodChainCross — 2024 | Unity · C# · Solo Project Prototype exploring food-chain reactions inspired by Crossy Road-style gameplay.

GreedyGoblin — 2024 | GXPEngine · C# · Solo Project Pac-Man-style arcade game focused on greed and collection mechanics, developed at Saxion.

Subject 51 — 2023 | Processing · Team of 6 Two-week horror escape game developed with a multidisciplinary team consisting of programmers, artists and a designer.

RIPD — 2023 | Unity Gameplay experiment exploring whether a licensed-IP-inspired fantasy concept could be translated into an interactive experience.

Salta Montes — 2022 | Unreal Engine · C++ · Solo Project Vertical climbing and jumping game developed independently.

Fishing Game — 2022 | Game Prototype · Solo Project Three-day environmental fishing prototype involving trash avoidance and reward mechanics.

Patox — 2023 | Unity · Team of 5 Adventure game developed for a FIAP year-group competition in collaboration with QUByte.

Curious Crumbs — 2024 | GXPEngine · Team of 6 Physics-based puzzle project developed at Saxion with programmers, artists and designers.

Astronaut Cat | Interactive / Web Project Interactive project based on an existing comic, with a playable web experience.

TECHNICAL SKILLS

Gameplay Programming

Unity / C#

Player Controllers & Character Mechanics

Combat & Shooting Systems

Enemy AI & Behaviour

Puzzle & Interaction Systems

State Management / State Machines
Progression Systems
UI Systems / UI Toolkit
Collision & Physics
Game Flow
Scoring & Difficulty Systems
