Professional Summary

Junior Gameplay Programmer with practical experience building gameplay systems in **Unity** using **C#**. Specialized in player mechanics, combat systems, puzzle logic, AI behaviors, and responsive controls. Currently seeking **freelance or fixed-price contracts** (20–30 hours/week), preferably paid per project to implement specific gameplay features, prototypes, or optimizations while continuing personal game development.

Highlighted Projects

Duck Duck Kill (Patox) – Favorite Project

- Developed core gameplay loop for a 2D arcade-style duck hunting shooter in Unity + C#.
 - Implemented player shooting mechanics, enemy AI (movement & behavior patterns), collision detection, scoring system, and basic physics.
 - Focused on smooth controls and engaging gameplay feel.
- Repository: <https://github.com/PatoxProgramador>

Stick to the Journey

- Built a complete drag-and-drop zebra puzzle game.
- Programmed puzzle mechanics, drag-and-drop interactions, level progression, state management, and UI systems using C# in Unity.

Memoriza y Valoriza (Latest Project)

- Created a memory-based educational game with value and memorization mechanics.
- Implemented matching systems, progressive difficulty, scoring algorithms, game flow, and polished UI/UX in Unity C#.

Additional Projects

Full portfolio and source code available at the links above.

Technical Skills

- **Programming:** C# (advanced), C++(basic)
- **Engine & Tools:** Unity(advanced), GitHub, GitLab, Unreal Engine(basic)
- **Gameplay Systems:** Player Controllers, Shooting/Combat Mechanics, Enemy AI, Puzzle Systems, State Machines, Coroutines, UI Toolkit, Collision & Physics, Progression Systems
- **Other:** Prototyping, Mobile Optimization, Clean Code Practices

Experience

Junior Programmer

Gameplay Programmer — *Memoriza* (Luza Group)

Contract Project | (7 months)

- Implemented the full gameplay logic in **Unity (C#)** for *Memoriza*, an onboarding game developed for **Luza Group**.
- Translated design requirements into functional gameplay systems and user interactions.
- Collaborated with a small team responsible for game design and art assets to deliver the final playable product.
- Successfully completed the project as a **paid contract**.

Gameplay Programmer — *Duck Duck Kill*

Collaborative Indie Project | ~6 Months

- Developed gameplay systems and programming features in **Unity (C#)** for a multiplayer-focused indie project.
- Worked with a small development team under a **revenue-share model**.
- Contributed to gameplay implementation during ~6 months of development before the project was discontinued.

Gameplay Programmer — Startup Project (Unannounced)

Ongoing Collaboration | [10/25] – Present

- Developing gameplay systems in **Unity (C#)** for an upcoming indie title in collaboration with an artist/designer.
- Responsible for implementing core gameplay mechanics and interactive systems.
- Project currently in development with **planned revenue share after release**.
